

ecopower

LOCATION:

Alexandra Hills SHS, Queensland

BUSINESS:

State High School

TASK:

To provide adequate ventilation to the school auditorium that was previously under ventilated. This caused heat to continue to build up, which in turn was causing events in the auditorium to become uncomfortable.

SOLUTION:

Edmonds designed a hybrid ventilation system to replace the existing 500mm natural ventilators with 12 x EP600 ecopower hybrid ventilators.

RESULT:

The environment in the auditorium has greatly improved and comfort levels for occupants can be sustained for much longer periods of time. Customer is more than satisfied with results of the ecopower.
